Defect Report

North Pharmacy E-commerce — automated test execution

Specification	**NP-QA-TC-001 v1.3**
Environment	https://202.4.101.118:1165 (self-signed certificate)
Browser	Chromium (Desktop Chrome, 1920 × 1080)
Executed	26 October 2026
Harness	Playwright 1.64, 35 spec files, 1 worker
Defects raised	**6 open** (2 Critical, 3 High, 1 Low) + 1 Blocked

1. Execution summary

Result	Tests	Share
Passed	249	52.2%
Failed	17	3.6%
Flaky (passed on retry)	4	0.8%
Skipped — `manual()`, `destructive()`, `blocked()`	207	43.4%
Total	**477**	**100%**

477 tests across 35 spec files, covering 424 unique test-case IDs; some IDs are exercised in more than one place (smoke and regression both). Full run time 1.0 h on a single worker, which the shared QA account requires.

Of the 17 failures, 4 were automation-side — a cart wait that assumed a server-side write on signed-out pages, where this build keeps the guest cart in the browser. Those were corrected after the run and verified passing (`NP-CRT-TC-005/006/007`, `NP-PDP-TC-015`). The remaining **13 failures are product defects**, and they map to the six defects in this report. All 13 were re-run individually on 26 October to confirm they still reproduce.

2. Defects at a glance

ID	Summary	Severity	Area	Cases
NP-DEF-001	Every product detail page returns HTTP 502	Critical	Customer — Product Detail	7
NP-DEF-002	Admin product search cannot find products by brand name	High	Admin — Product Catalogue	2
NP-DEF-003	An already-reviewed prescription can still be rejected	Critical	Admin — Prescription Review	1
NP-DEF-004	The "In stock" badge fails the WCAG AA contrast minimum	High	Cross-cutting — Accessibility	1
NP-DEF-005	Mobile touch targets fall below the 44 x 44 minimum	High	Cross-cutting — Accessibility	1
NP-DEF-006	A long search term breaks the results page layout	Low	Customer — Search	1

Severity is taken from the test case document and is the starting assessment, per section 7.2. Each defect is reproduced by the named cases, so re-running those cases is the retest.

NP-DEF-001

Every product detail page returns HTTP 502

Severity	Critical	Priority	P1	Status	Open
Area	Customer — Product Detail				
Test cases	`NP-PDP-TC-001` · `NP-PDP-TC-002` · `NP-PDP-TC-003` · `NP-PDP-TC-009` · `NP-PDP-TC-010` · `NP-CNT-TC-008` · `Smoke NP-PDP-TC-001`				

Steps to reproduce

1. Open the storefront and go to **Shop**.
2. Click any product card, or request a product URL directly, e.g. `/p/4b588f69-008b-4e62-b98c-3f85c67199b5/napa-500-mg-tablet`.

EXPECTED

The product detail page renders with name, price, MRP, stock state and the prescription badge.

ACTUAL

The gateway error document is served instead of the application. Reproduced on all 23 products reachable from the listing, on repeated requests, and confirmed independently with `curl` (HTTP 502). Home, Shop, Search, Cart, Checkout, Account and the entire Admin area respond normally.

Impact

A customer can browse and search but cannot open a single product. The listing card becomes the only place price, stock state and the prescription badge can be read, and every shared or indexed product link is dead. The whole of module A4 (21 cases) depends on this route.

Failure output

```
Error: product detail must render
expect(received).toBeFalsy()
Received: true

Page snapshot:
  heading "Server Error" [level=1]
  heading "502 - Web server received an invalid response while acting as a
           gateway or proxy server." [level=2]
```

Knock-on effect — NP-CNT-TC-008 (broken links)

The broken-link sweep over the customer site reports **23 links returning 502**, every one of them a `/p/:id/:slug` route. No other route on the site is broken, so this case will clear as soon as the product route is restored.

```
Error: broken links found:
  /p/b5f53e16-.../windel-plus-3-ml-solution   -> 502
  /p/223b5009-.../gluco-needle-lancer-others  -> 502
  /p/4b588f69-.../napa-500-mg-tablet          -> 502
  /p/374d679e-.../merobac-1-gm-injection      -> 502
```

```
  ... 19 more, all /p/* , all 502

Expected length: 0
Received length: 23
```

Evidence

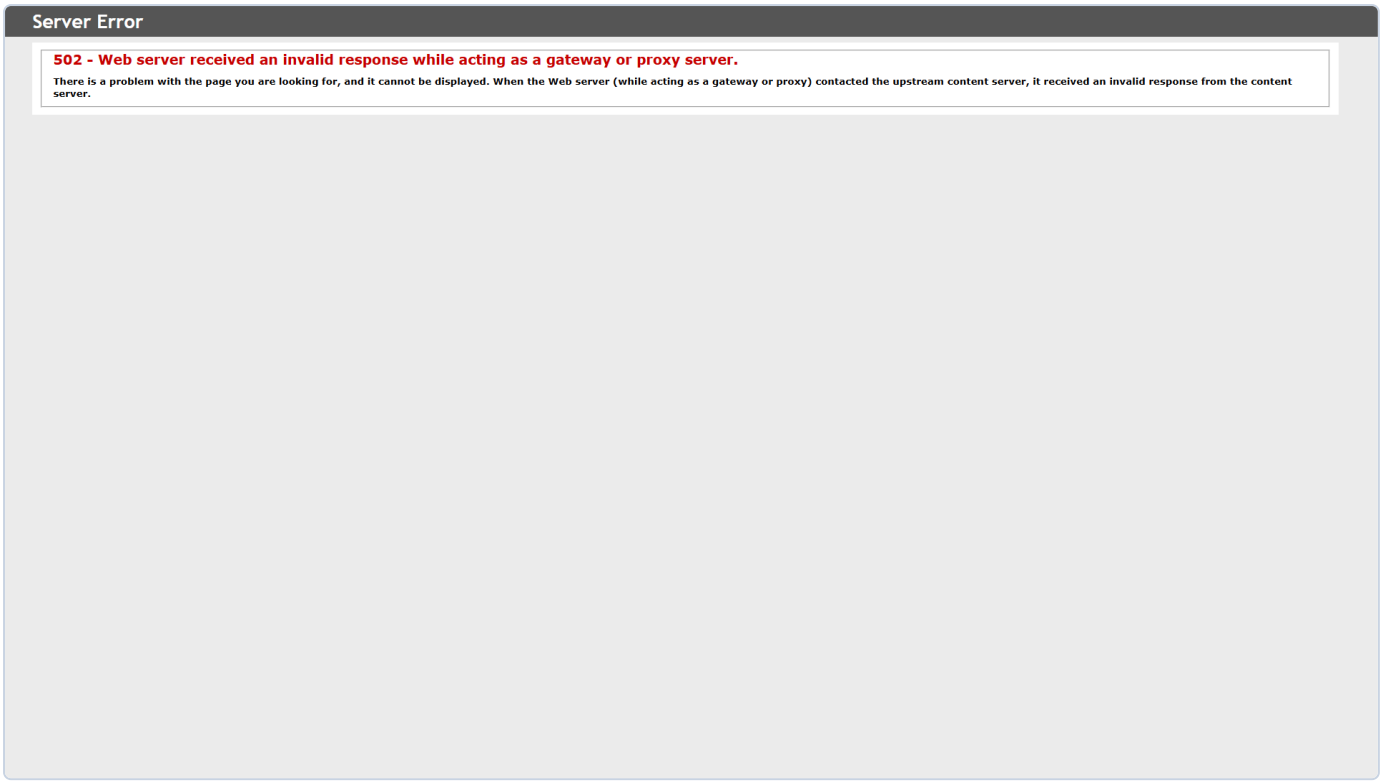

Figure 1.1 — NP-PDP-TC-001 — the 502 gateway document in place of the product page

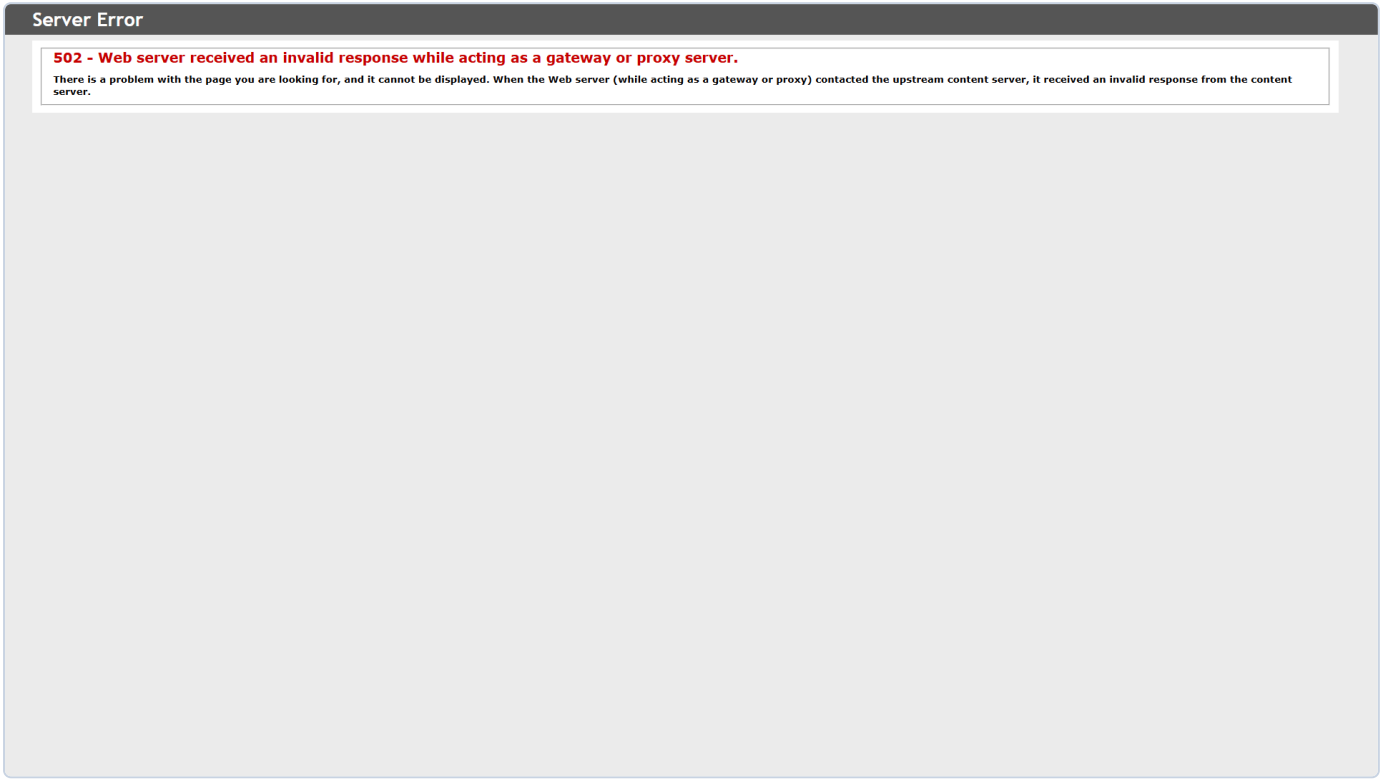

Figure 1.2 — NP-PDP-TC-009 — an invalid slug returns the same 502 rather than a not-found page

NP-DEF-002

Admin product search cannot find products by brand name

Severity	High	Priority	P2	Status	Open
Area	Admin — Product Catalogue				
Test cases	`NP-PRD-TC-011` · `NP-PRD-TC-023`				

Steps to reproduce

1. Sign in as the store administrator and open **Admin › Products**.
2. Type `Napa` into the "Product, generic or manufacturer" search field and submit.

EXPECTED

The result count is accurate and consistent with the customer catalogue, which returns 24 products for the same term.

ACTUAL

The list shows **"No products match that search."** Generic names work; brand names do not.

Search term	Admin inventory	Customer catalogue
Napa	0 results	24 products
Dps	0 results	present (§2.6 reference product)
Paracetamol	10 results	24 products
Merobac	1 result	present

Impact

An administrator cannot locate stock by the name printed on the box, which is exactly how the reference data in section 2.6 of the test plan names products.

Failure output

```
Error: searching the admin catalogue for the seeded brand "Napa" must
return the same products the storefront returns for it

expect(received).toBeGreaterThan(expected)
Expected: > 0
Received:   0
```

Evidence

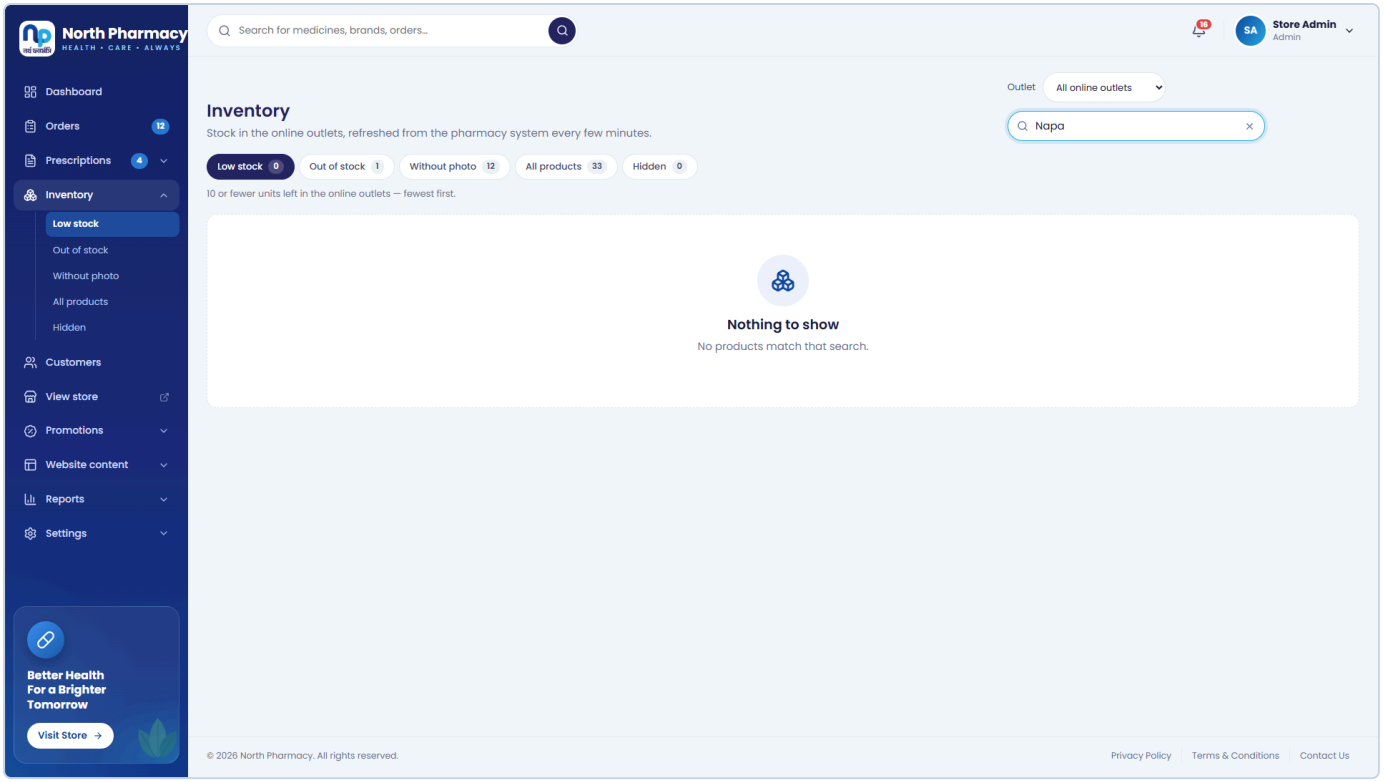

Figure 2.1 — NP-PRD-TC-011 — "No products match that search." for the seeded brand Napa

NP-DEF-003

An already-reviewed prescription can still be rejected

Severity	Critical	Priority	P1	Status	Open
Area	Admin — Prescription Review				
Test cases	`NP-RXA-TC-014`				

Steps to reproduce

1. Sign in as the store administrator and open **Admin › Prescriptions**.
2. Select the **Approved** tab and inspect the review controls on any record.

EXPECTED

Review controls are absent or disabled on an already-reviewed record, and the original decision and its audit entry are preserved.

ACTUAL

Approve is correctly disabled, but **Reject remains enabled on all 6 approved records**, so a decision that has already been made can be reversed from the interface.

Impact

A prescription a pharmacist has already approved — possibly with an order released against it — can be flipped to Rejected by a second administrator with no conflict check. This is the pharmacist sign-off audit trail that the entire Rx control depends on.

Related: **NP-RXA-TC-017** (two administrators reviewing concurrently) is gated behind `RUN_DESTRUCTIVE=1` and has not been exercised. It is likely affected by the same missing guard.

Failure output

```
Error: an already-reviewed prescription must not offer any active review
control, but these are still enabled: Reject, Reject, Reject, Reject,
Reject, Reject

expect(received).toHaveLength(expected)
Expected length: 0
Received length: 6
```

Evidence

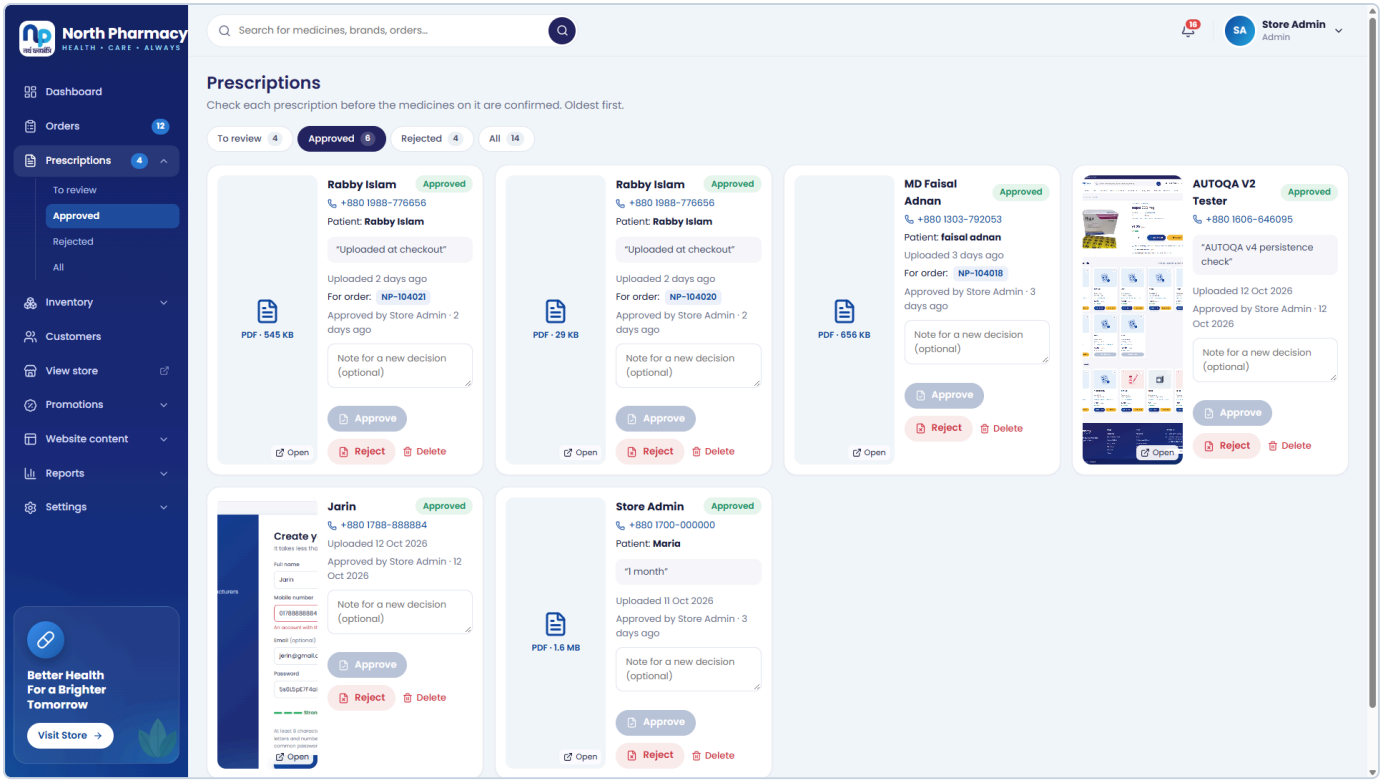

Figure 3.1 — NP-RXA-TC-014 — the Approved queue, with Reject still active on every record

NP-DEF-004

The "In stock" badge fails the WCAG AA contrast minimum

Severity	High	Priority	P2	Status	Open
Area	Cross-cutting — Accessibility				
Test cases	`NP-ACS-TC-006`				

Steps to reproduce

1. Open any listing page showing stock badges.
2. Measure the computed foreground and background colours of `.stock-in` / `.stock`.

EXPECTED

A contrast ratio of at least 4.5:1, the WCAG 2.1 AA minimum for normal text.

ACTUAL

The stock label measures **3.84:1** — `rgb(27, 148, 102)` on `rgb(255, 255, 255)`. Measured from computed styles, with gradients resolved to their first colour stop.

Impact

The test plan names elderly and low-vision customers as a primary audience, and stock state is what decides whether an order can be placed at all.

Failure output

```
Error: badge contrast failures -
  .stock-in: 3.84:1 needs 4.5:1 (rgb(27, 148, 102) on rgb(255, 255, 255))
  .stock:    3.84:1 needs 4.5:1 (rgb(27, 148, 102) on rgb(255, 255, 255))

Expected length: 0
Received length: 2
```

Evidence

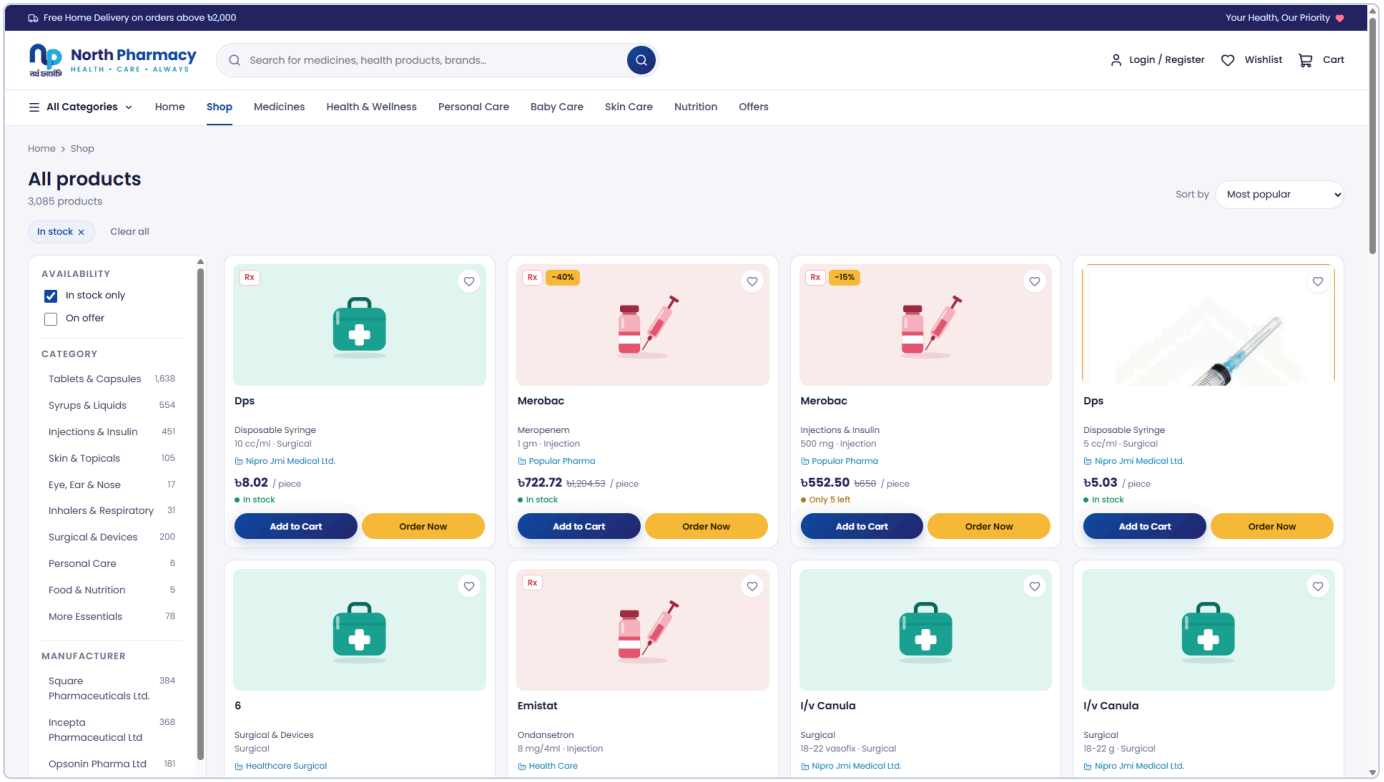

Figure 4.1 — NP-ACS-TC-006 — stock badges on the listing

NP-DEF-005

Mobile touch targets fall below the 44 x 44 minimum

Severity	High	Priority	P2	Status	Open
Area	Cross-cutting — Accessibility				
Test cases	`NP-ACS-TC-010`				

Steps to reproduce

1. Open the storefront at a 360 px viewport.
2. Measure the rendered size of every interactive control.

EXPECTED

Every interactive control is at least 44 x 44 CSS px.

ACTUAL

34 controls are below the minimum, including the primary purchase actions.

Control	Rendered size
Login / Register	20 x 20
Wishlist	26 x 20
Cart	27 x 21
Wishlist heart (every card)	30 x 30
Add to Cart / Order Now	128 x 36
Home / Shop / Offers	42 x 50 / 36 x 50 / 42 x 50

Impact

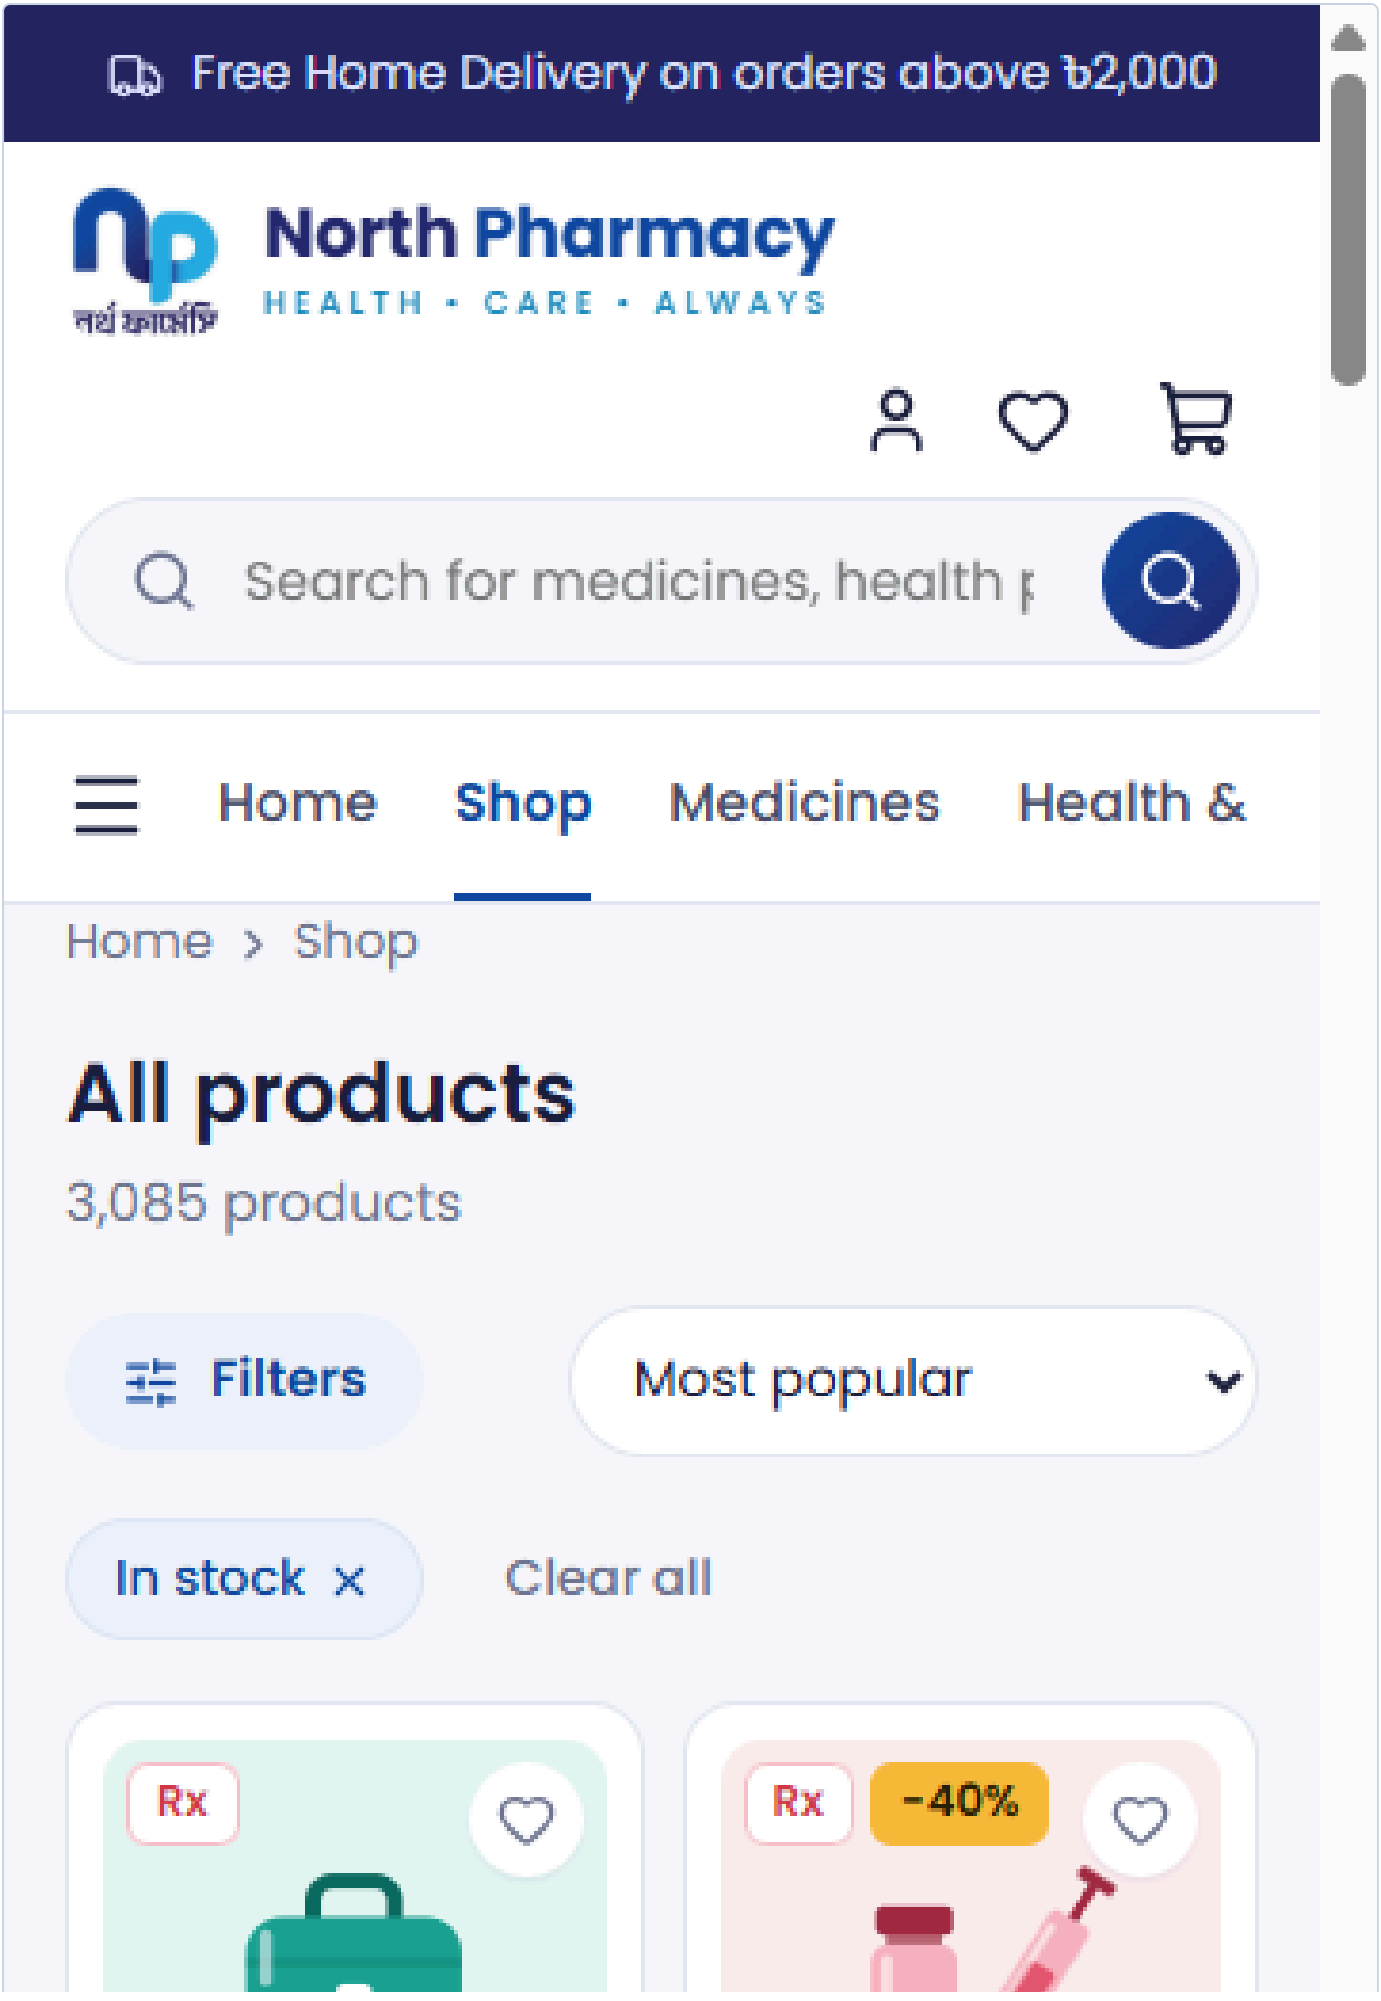

Mobile is the dominant channel for this product, and the undersized controls include Add to Cart and Order Now on every product card.

Failure output

```
Error: targets below 44x44 CSS px: North Pharmacy home (202x42),
Login / Register (20x20), Wishlist, 0 items (26x20), Cart, 0 items (27x21),
Home (42x50), Shop (36x50), Offers (42x50),
Save Dps to wishlist (30x30), Add to Cart (128x36), Order Now (128x36), ...

Expected length: 0
Received length: 34
```

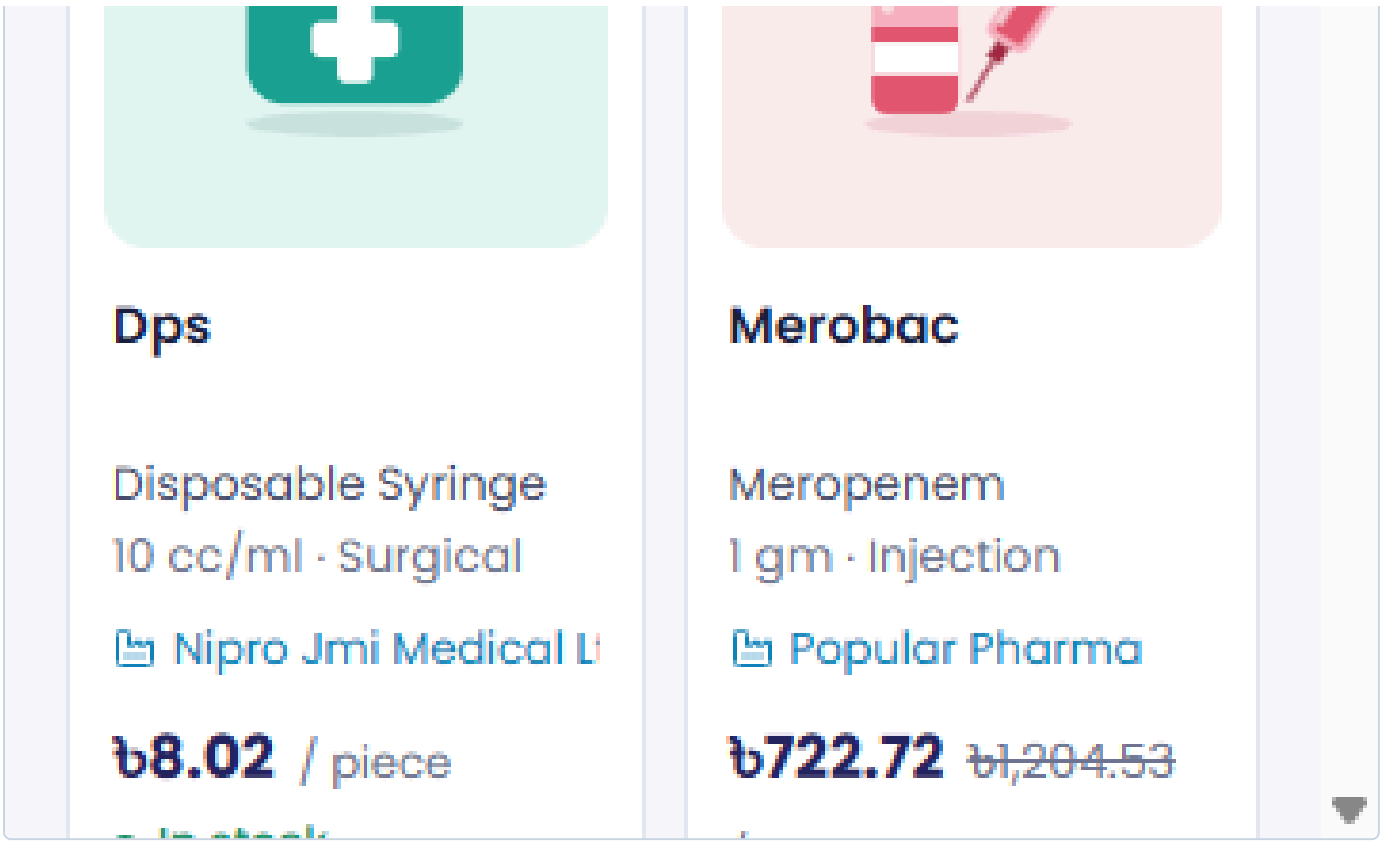

Figure 5.1 — NP-ACS-TC-010 — the storefront at 360 px

NP-DEF-006

A long search term breaks the results page layout

Severity	Low	Priority	P3	Status	Open
Area	Customer — Search				
Test cases	`NP-SRC-TC-010`				

Steps to reproduce

1. Enter a 500-character search term into the storefront search field.
2. Submit and inspect the results page.

EXPECTED

The term is truncated at a sensible limit, or accepted gracefully without affecting the layout.

ACTUAL

The term is echoed into the results heading ("Results for “aaa…”") without wrapping or truncation. The page grows **6,966 px wider than the viewport** and the whole document scrolls sideways.

Impact

Cosmetic rather than functional, but the sideways scroll affects the entire page, not just the heading, and the case allows either truncation or graceful acceptance — neither happens.

Failure output

```
Error: a long query must not break the layout
expect(received).toBeLessThanOrEqual(expected)
Expected: <= 2
Received:    6966
```

Evidence

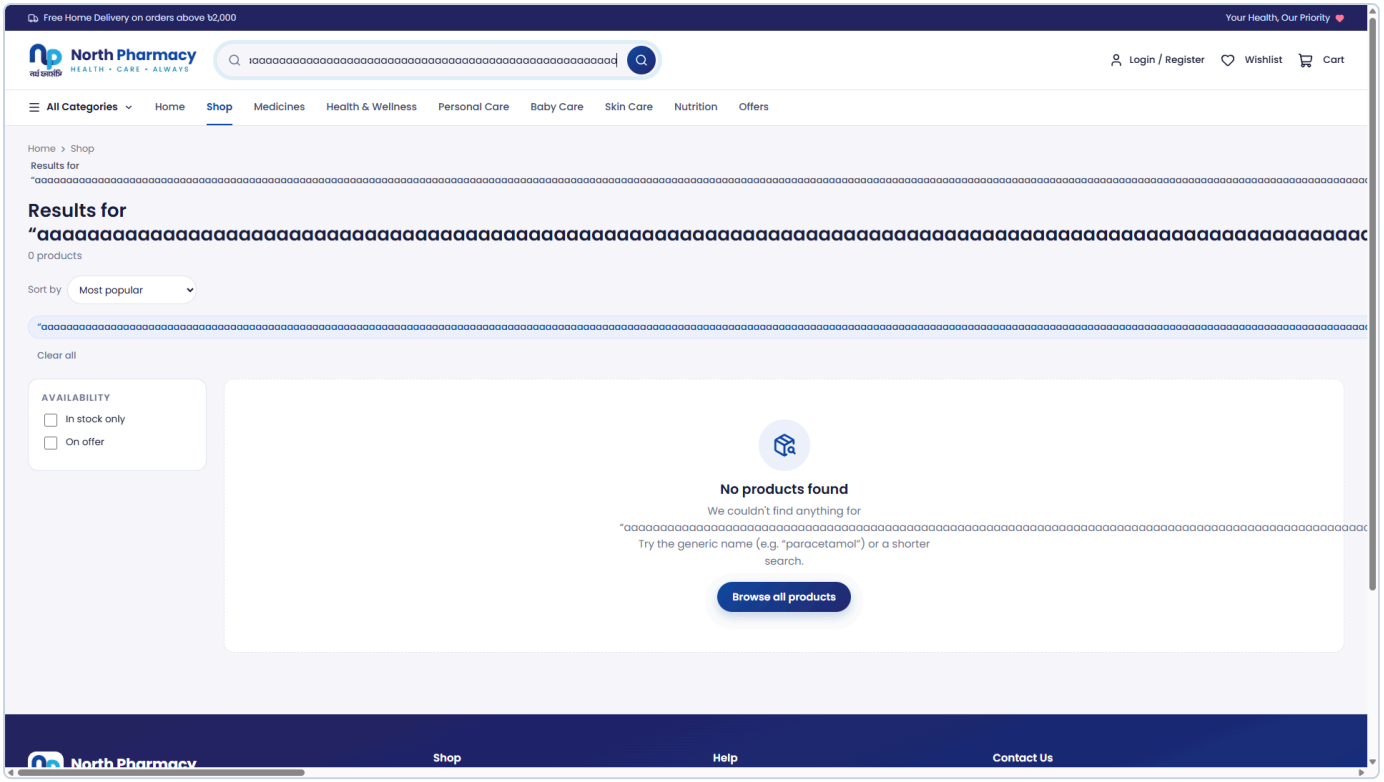

Figure 6.1 — NP-SRC-TC-010 — the results page after a 500-character query

Blocked — not a defect to fix blind

`NP-FGT-TC-001 … NP-FGT-TC-008 (8 cases)`

Online password reset is switched off

The reset page states "*Online reset isn't available right now. Please call our hotline and we'll help you reset your password.*" and the **Send code** button is permanently disabled, so no code can be issued.

These eight cases are recorded as **Blocked** with that reason rather than Failed. The suite asserts the one thing that is testable: that the unavailability is stated clearly, the hotline is offered, and nothing can be submitted.

Action needed: confirm with the business whether this is intentional for this build. If it is, the A9 cases stay Blocked for this cycle. If it is not, it is a Critical gap — a customer who forgets their password has no self-service route at all.

Environment notes (not defects)

Observation	Detail
`/admin/dashboard` is a 404	The dashboard is served at `/admin`. NP-SEC-TC-004 names `/admin/dashboard`; the suite checks `/admin` and the other admin routes instead. Worth correcting in the test case document.
No "Member since" date	The account overview omits it, where NP-ACC-TC-013 expects it. Flagged in the case rather than failed.
No terms checkbox	The registration form omits it, where NP-REG-TC-012 expects it. Flagged in the case.
Guest cart is client-side	A signed-out cart is held entirely in the browser and issues no API call; a signed-in cart is server-side via `/api/cart`. Not a defect, but it changes how cart state must be verified.
Self-signed certificate	The IP host presents one. An environment artefact per standing pre-condition 2.5, handled by `ignoreHTTPSErrors`.
